In 2004, the Wall Street Journal reported that Autodesk spent more than $33 million on marketing and advertising in 2003, and that its annual revenues had doubled between 2002 and 2003 to reach $1 billion. Autodesk's 2004 Annual Report stated that the company had $2.7 billion in revenues in 2003, and had grown its staff by 20% in 2004, with 18% of its employees working in product development, and 19% working in the sales and marketing departments. Beginning with Autodesk Revit Architecture 2011, Autodesk started to offer a service based on AutoCAD Crack Keygen. The service is accessible through the web (Internet). Users can upload their drawings and receive comments on their drawings. The first version of Cracked AutoCAD With Keygen was based on the XT/AT computer line from Xerox PARC, and was developed for the original IBM PC. This enabled AutoCAD to be run directly from the computer without having to be installed on a disk or other type of computer storage device. AutoCAD's commercial release was version 2.0. Autodesk produced two major upgrades in the following two years: version 3.0 in 1986 and version 3.1 in 1987. Version 3.1 had the much-touted "scalable fonts" feature. The first version of AutoCAD for Windows (PC) was produced in the late 1980s, and by 1992 there were more than 600,000 copies sold. In 1988, Autodesk introduced AutoCAD LT, which provided a simplified interface to non-graphics programs. With the release of AutoCAD 5, Autodesk introduced many new technologies. First, AutoCAD LT was integrated with the Windows operating system. With a license for AutoCAD LT, AutoCAD users could convert any text and graphics from their existing older programs to the new DWG format. The first AutoCAD 5 release (1989) was version 5.0. In the 1990s, AutoCAD was extensively used for designing aircraft, cars, and housing. The US Federal Aviation Administration (FAA) now uses this software extensively to design and inspect aircraft. The first iPhone app of Autodesk was AutoCAD LiveView for iPhone. It enables iPhone users to connect to and view their AutoCAD drawings over the network, and perform drawings with almost no restrictions. Users can also view AutoCAD drawings while making annotations or performing other tasks on their iPhone

Field of the Invention The present invention relates to an optical disc, and more particularly, to an optical disc that is rewritable. 2. Description of the Related Art A write once-type optical disc is rewritable. Rewritable discs such as phase-change type and magneto-optical type are used as rewritable optical discs. For example, Japanese Laid-Open Patent Application No. 7-89880 discloses a rewritable phase-change optical disc having a protective layer. The patent application proposes the protective layer made of silicone dioxide, a water-based gel, or a fluorine-based resin, so as to prevent the optical disc from being abraded and to increase the life of the optical disc. However, if the protective layer is formed of silicone dioxide or a water-based gel, the reflective light intensity lowers in comparison to the case where no

protective layer is formed. Therefore, the contrast of the read signal lowers. In addition, since a1d647c40b
