Contents History Autodesk has been developing AutoCAD since the early 1970s. When CAD started, computers were bulky, noisy, expensive, slow, and insecure. Graphics, on the other hand, were readily available, fast, and inexpensive, thus providing an opportunity to market CAD software. In 1972, Autodesk created its first CAD product, Graphics Computer System (GCS). GCS was an integrated CAD/graphics package which was primarily designed for use in desktop computers with built-in graphic display devices (like the IBM 370) and a mainframe computer (like the IBM AS/400) as the CAD processor. This was a radical departure from the mainframe CAD packages which were usually run on a separate graphics workstation, with a "mainframe operator" (MCO) working at a terminal connected to the mainframe. Autodesk soon acquired a number of small, independent CAD package vendors and integrated their products into AutoCAD. This caused a major upheaval in the company. Many Autodesk employees left to start their own companies and many smaller companies with independent CAD products were acquired by Autodesk to become part of Autodesk. the AutoCAD R14 release, it has new capabilities for file synchronization and access for mobile devices, including iOS and Android. Document management AutoCAD has also included a revision-tracking system for documents since AutoCAD 2006, called the Revision Manager, along with a revision history, which allows the user to see the changes in each revision. This includes such things as the wear by miners of shields, masks or hoods that fit over the entire face, or separate filter masks and hoods which protect only the mouth and nose, or separate masks which protect only the mouth or nose, and others which use combination hoods and masks for protection. Respirators such as the aforesaid prior art devices have been found to be less than completely effective in many situations and, in some cases, tend to be expensive, cumbersome and uncomfortable to the user, particularly when being used during the construction of buildings. Thus, it is an object of this invention to provide an improved respirator which is relatively inexpensive to manufacture and which is designed to effectively protect the mouth and nose of the user, as well as being comfortable, while being easily used and applied. It is a further object of this invention to provide such a respirator which is capable of being attached to a portion of a person's head, such as a person's cap or hat, and which will effectively filter harmful dusts and vapors from the air passing through it, and which is also capable of effectively cleaning itself by having a wiper action against the face to which it is attached.(Newser) – A little boy got his hand sliced by a giant water balloon in Vancouver, British Columbia, reports the New York Daily News. While it's unlikely the balloon's pilot was trying to kill the boy, witnesses said the balloon was being operated by a child who didn't realize the target was smaller than himself, and the large balloon was still full of air and water. The balloon apparently split at the opening, filling the 5b5f913d15
