Markup Assist helps you to incorporate the right text style for the right use case. It also makes it easy to preview typography and font changes in context with your design. Text Edit Assist makes working with markup text even easier. For example, you can apply font changes from another drawing. In 2D, the AutoCAD EditsandExchanges.com website has over 70,000 font and graphic resources available for download. Editing of a label automatically updates that label on all levels. Automatically, without further editing steps. You can quickly and easily annotate individual parts on the model, without the need to first place a graphic. Then, you can use the attributes editor to add additional information for more refined labeling of the drawing. Continuous Pen and Brush: Your strokes, or “ink,” don't have to be tied to a single tool. Any tool can perform strokes in its vicinity, and you can easily switch tools and change the length of strokes. The software draws, erases, and saves strokes without having to first place a graphic. Brush tips can have a softer or harsher edge. You can adjust the width of the brushstroke through the same command interface as you would to adjust the width of a pen. Use the same tools to adjust line width. Drawing Snapshots and Snap Previews: Take a quick snapshot of your drawing and then return to editing with a more accurate, finished view. The QuickToolbar has been redesigned and now shows the position of the Snapshot button in the middle of the toolbar. Simply click the button to take a snapshot of your drawing, and then click the button again to return to editing. Take a snapshot of any dynamic annotation on a drawing, such as text and line weights. Snapshots are saved with the drawing, so they can be used later, such as for comparison purposes. Annotation colors, line weights, and other settings are preserved when you take a snapshot. Editor-only: You can save the current drawing state in a new Drafting View to help you review and compare your design with a previous state of the drawing. Prospects: Prospects is a new capability to create visual guides to help you design assemblies. The technology provides a visual representation of parts and components.
