## Photoshop EXpress

The invention relates to a method for fabricating a thin film transistor substrate, a flexible plastic substrate, and a flexible thin film transistor substrate and, in particular, the invention relates to a method for fabricating a thin film transistor substrate used in a flexible display. In recent years, a flexible display (e.g., a flexible organic EL display and a flexible liquid crystal display) has become more widely used. As described in Japanese Patent Application Publication No. 2009-228049, a conventional method for fabricating a TFT substrate (a substrate in which a thin film transistor is formed) used in a flexible display includes performing a step (expansion step) in which a protection film for protecting a substrate from cracks is formed on a silicon substrate including an active layer of the thin film transistor, a step (curing step) in which the protection film is irradiated with a radiative energy beam (e.g., laser light) to cure the protection film, and a step (contacting step) in which the surface of the cured protection film is brought into contact with an adhesive sheet having pressure-sensitive adhesive to attach the protection film to the adhesive sheet. Conventionally, a corona charging device has been used in the expansion step and the contacting step. When the corona charging device is used, the protection film is charged with electric charge. Accordingly, the protection film is caused to adhere to the adhesive sheet. However, since the sheet having electric charge is not electrically conductive, the sheet is not sufficiently absorbed to the adhesive sheet, thus resulting in scratches being caused on the protection film. In the contacting step, the protection film is brought into contact with the adhesive sheet. However, the sheet having electric charge is not sufficiently absorbed to the adhesive sheet, and thus resulting in scratches being caused on the protection film. Epithelial cell adhesion molecule expression in the epithelium adjacent to colorectal cancers. A quantitative study in paraffin sections. Epithelial cell adhesion molecule (EpCAM) is a recently isolated transmembrane protein expressed in many epithelial-derived malignancies. Little is known regarding its expression in normal colonic tissue. We therefore investigated the expression of EpCAM in formalin-fixed paraffin-embedded tissue samples of normal colonic mucosa and of colonic adenocarcinomas by immunohistochemistry and immunofluorescence. Colorectal cancers showed reduced EpCAM expression compared

## What's New In?

To make your life and experience easier on the road, the last thing you'll want to do is drag a laptop and your phone charger along with you. That's why the Road Warrior M18 has a built-in battery and a mobile charging cradle. Power and charge the Road Warrior M18 with just one wire. Just power up the Road Warrior M18 with one power connector and plug the cradle into the battery flap. Have you ever needed to get away from your busy life and enjoy some peace and quiet, but were not able to leave the house? If so, you've probably experienced a bit of what is

---

referred to as “Sabbatical Syndrome.” Luckily, the QM3 has a very compact 8 GB, 2.5-inch USB drive that can serve as your own personal travel back-up. Remember: The USB port on the QM3 is in the base of the unit, not the lid. The QM4 is quite simply the ugliest QM-series model in our arsenal of shiny new gadgets. However, we have to give this simple camera unit props for being a dSLR size without the bulk. As compact as the QM4 is, the 16.0 MP camera with 4x optical zoom and two-inch LCD capture your images as crisp as you’d expect of a more expensive dSLR. The HG3 is the ultimate travel companion. Whether you’re on a family vacation, a beach getaway, or just taking a weekend to hike somewhere new, the HG3 provides both the power and the security to capture a lifetime of memories. The HG5 is a serious travel partner that’s great for a wider variety of activities. If you’re planning a water adventure, the HG5 will help you capture the entire experience of your day spent in the water, from the moment you put on your gear to the moment you exit the beach. The HG6 has the same rugged, water resistant exterior of its sister unit, but on the inside it has a much higher capacity battery. The HG6 can be used to power the video mode on your camera, and if you plan on shooting HD video, this is the last model you’ll ever need. Wanting to prepare your LG G4 for a weekend getaway, you want to ensure it has all the necessary power and security you can carry with you. The J
