How to detect the keygen When you use Autocad (more precisely its key), you will be asked to type the license key in every time you open the program. Q: How to choose a "compact" GPU-less video encoder? When I want to transfer a video from my computer to another computer using a wireless connection, I often do it by transcoding the video using ffmpeg, e.g. `ffmpeg -i video.mp4 -vcodec libx264 -preset ultrafast -b:v 1500k -b:a 128k -c:a pcm_s16le -y video.mp4` and, of course, you have to wait until the entire video has been transcoded. However, it seems that ffmpeg is a relatively fat and heavyweight app. If I use the command `ffmpeg -i video.mp4 -vcodec libx264 -preset ultrafast -b:v 1500k -b:a 128k -c:a pcm_s16le -y video.mp4` I can do it while the video is being transcoded, but I would prefer to do it in real time, but apparently ffmpeg doesn't support this mode. I've been searching for a light-weight command line application, but I haven't found any. Any suggestions? A: You can try fast-video-streaming, and you don't need to use a GPU. It's a libx264 wrapper which comes with ffmpeg. For example: `ffmpeg -i -i -y -vf "format=pix_fmts=yuva420p" -movflags +faststart` If you want to transcode to a lower resolution/bitrate video, you can use the -vf (video filter) option with the -framerate or -r (fps) option, for example: `ffmpeg -i -i -y -vf "format=pix_fmts=yuva420p" -framerate 30 -`
