An article we wrote for this book and available online explains how to work with images effectively using Photoshop, and the book *Writing and Publishing an eBook: Ten Tips (WUPE10)* has ten more tips for successfully using Photoshop to write and publish an eBook. Using Photoshop for writing Writing is, in some ways, like an art form, and Photoshop is a good tool to be used to create images that can be used in the text of an eBook. You can use Photoshop to transform images to create unique graphics with the power of the program. You can even create some type of eBook cover that shows your writing and helps the reader to get a feel for what the book is about. In order to create an image to use in the text of an eBook, you need to understand how Photoshop layers work. This section explains the work flow for using the layers in Photoshop to create an image that can be used in your eBook. Understanding layers in Photoshop A layer is a convenient method for organizing information in a design. The layer masks in Photoshop enable you to manipulate an image by changing which parts of an image are visible. The layers enable you to work on multiple images simultaneously, allowing you to make adjustments and see the effect immediately. Layers are most effective when you take the time to understand how they work, so you can use them to create graphic design. Shaping with layers Layers are convenient for working on multiple images simultaneously. You can open multiple images in Photoshop, and then work on each image layer separately. You can add, remove, and modify the layers as you work, and then save your project as a single file. In the following steps, I use the same image to create a couple of different graphic designs: 1. Open an image in Photoshop. 2. Use the Rectangle Select tool to create a square that's 10 pixels wide and 200 pixels high, as shown in Figure 4-1. Figure 4-1: Use the Rectangle Select tool to create a 10 × 200-pixel square. 3. Save the file. 4. Use the Layer palette to open the Layer properties, as shown in Figure 4-2. 5. Notice that you have the Select, Mask, and Desaturate commands available in the panel. 6. The Layer's Mask properties have a square that includes the square you created earlier. Using the brush tool, click within the square

Q: Set up a simple reducer with array of objects in Redux I'm trying to set up a simple reducer that takes in an array of documents (objects) and outputs an array of aggregated documents. For example, document 1 in the list contains a firstName field and a lastName field. The reducer should take document 1, document 2, document 3, and merge the two documents into one document array called docs, which looks like: { "docs": [{ "firstName": "John", "lastName": "Doe" }, { "firstName": "Jane", "lastName": "Doe" }] } This is what I came up with: const initialState = { docs: [] }; export default function (state = initialState, action) { switch (action.type) { case 'add': return { docs: state.docs.concat(action.payload) }; default: return state; } } For some reason, state.docs.concat(action.payload) doesn't work and I can't figure out why. I can console log state.docs and I get the expected list of documents, but adding them to the object throws an error. Any help would be appreciated. A: docs: state.docs.concat(action.payload) Should be docs: state.docs.concat(action.payload.docs) Because you have two arrays that you want to add together. Also, I don't think the payload will be an array. You're confusing it with
